GitHub?

GitHub is pretty much the go-to tool for crafting blogs and other websites, but not everyone gets onboard with it automatically. It pays to know why GitHub has high utility value before actually using it, as well as the small drawback that prospective users need to be aware of.

- Repository hosting service with a web-based graphical interface

- Number of collaboration features

- Easy contribution of open source projects

- Easy storage and presentation of your work

- http://jaschwer.github.io/
